

## **OHIO BUREAU OF MOTOR VEHICLES SELECTS CBOSS TO BUILD THE 'NEXT GENERATION' OPLATES VEHICLE REGISTRATION SYSTEM**

For Release – April 16, 2009

**BOARDMAN**, Ohio - [CBOSS](#) today announced that the [Ohio Department of Public Safety's Bureau of Motor Vehicles](#) (ODPS-BMV) has awarded it a new contract to design, develop and host the 'next generation' solution for OPLATES, Ohio's online vehicle registration and renewal system.

OPLATES ([www.OPLATES.com](http://www.OPLATES.com)) is a web-based vehicle registration system that CBOSS developed, designed and currently hosts at its network operations center in northeast Ohio. Since CBOSS delivered the system to go live in 2000, it has been used by millions of private citizens and businesses to renew vehicle and fleet registrations and order specialty plates. In the 2008 calendar year, OPLATES processed close to one million transactions.

"We are delighted that ODPS has awarded us a new contract to deliver the next generation of OPLATES," said Doug Carr, CBOSS general manager. "By providing reliable and proven technologies that deliver the most current functionalities, we can help the BMV provide the highest level of service to their customers. We are pleased to once again have the opportunity to work with the OPLATES team on this next generation of OPLATES services."

CBOSS will design a new architecture for both the OPLATES web and interactive voice response (IVR) applications using the latest and most secure software tools and services. The new system will feature even greater flexibility and scalability to ensure optimal performance and support for new features, services and increased traffic. The OPLATES system will use the [CBOSS Central Payment Portal](#) to process all payment transactions for renewals and new plate orders.
